Protecting your product, enhancing your brand.

What is a Viskring?

A unique product, our Viskrings are eco-friendly bands made from cellulose.

Supplied in a preservative solution, these bands are used as an external seal on your containers.

The Viskring can shrink up to 30% of their original size, so can fit around challenging shapes!

Easy to use, these bands require no machinery as they are hand applied while still wet. They shrink evenly as they dry out, resulting in a high quality, luxurious finish on your container.

As they require no heat to shrink, they are perfect for heat sensitive products or flammable liquids / gas.

Viskrings are made from extruded cellulose. That means the main ingredient in these bands is wood pulp sourced from sustainable sources!

The seals are bio-degradable and home compostable – you can put them in your food waste instead of disposing of these through conventional waste-streams.

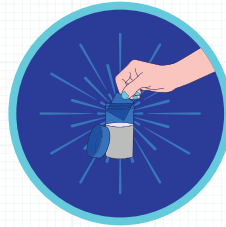

Once extruded these are cut to the size you require and packed in containers with a mild preservative solution ensuring the product does not degrade in storage. Guaranteed for use up to 12 months from the date of manufacture, provided they remain unopened in their original container.

They can withstand temperatures as low as -10°C during this time!
