TAMPER EVIDENT PACKAGING SOLUTIONS

Viscose Closures Limited is a proud UK manufacturer of Film and Cellulose tamper evident solutions which are supplied worldwide from our Swansea Headquarters. We manufacture a wide range of tamper evident and packaging solutions to numerous sectors across consumer, industrial and pharmaceutical industries.

The tamper evident bands produced in Swansea are made from four substrates: Cellulose, PET, PVC and PLA and are available in three formats tubing, cut bands and preformed bands. Viscose is also the only UK manufacturer of capsules, secondary seals for bottled products in a wide range of sectors, made from PVC or PET that can be fully customised to your specific requirements.

Viscose has a strong commitment to reducing its carbon footprint by developing environmentally friendly packaging and tamper evidence solutions.

Cellulose bands are our core product made from extruded, plant-based cellulose, meaning the main ingredient in these bands is wood pulp obtained from renewable sources. Our seals are bio-degradable and home compostable allowing them to enter the food waste instead of disposing of them through conventional landfill waste-streams.

Clients Typically Choose To Work With Us For One Or More Of The Following Reasons:

- High performance, quality products. All our products are made from the best quality raw materials and manufactured to the highest standards.
- UK manufactured
- Local & Global customer account management
- Experienced customer services team
